

actsafe<sup>★</sup> **DO YOU HEAR THAT?**

Carpentry shops in the film industry generally have average sound levels of:

**87 dBA**

you should be wearing  
Class C hearing protection

Class C earplugs or earmuffs will provide enough protection for average sound levels in a carpentry shop. For louder work, such as power sanding, drilling, hammering, cutting, etc, consider wearing Class A or B hearing protection. For noise above 110 dBA (roughly, the sound level of a power saw) consider both earmuffs (Class B) and earplugs (Class A) together.

Did you know that you should have your hearing tested annually? Actsafe offers free hearing testing. Call Reliable Mobile Hearing Testing at 604.596.8414 to book.
